Outplacement - Barriers and Challenges of Implementation by Small and Medium-Sized Enterprises in Poland

Introduction

The global financial and economic crisis forces undertaking restructuring actions by companies. These processes are commonly associated with implementation of solutions for optimization operating costs in human capital dimension. In former communist states of Eastern, South-Eastern and Central Europe like Poland these changes are associated with political, social and economic transformation from late 20th century. The restructuring processes are perceived here as an activity for layoffs, which consequently leads to increase of unemployment, including long-term and structural unemployment. Outplacement is relatively little popular technique oriented on responsible monitored dismissals for a smooth transition of laid-off workers to new workplaces. In this way, both employees and companies increases their chances for maintaining competencies and better adaption to market competition requirements. In this article outplacement will be described as a concept with mechanisms similar to active labor market policies. However outplacement is aimed at prevention of unemployment, not on action when it already occurs. Key challenges are cooperation of enterprises with public and non-public employment services as well as adapting these programs to the needs and capabilities of small and medium-sized enterprises. Article includes a critical analysis of the literature as well as selected results of research conducted in Podlaskie Voivodship in 2012 as part of “Innowacje na zakręcie - testowanie i wdrażanie nowych metod outplacementu” (“Innovation on the cusp - testing and implementation of new outplacement methods”) project. Summary includes recommendations for dissemination and implementation of outplacement as a good practice of corporate social responsibility.

Outplacement as a possible response of Polish enterprises to the restructuring during economic crisis

The competitiveness of the European economy increasingly depends on its ability to innovate as well as fast and smooth adaptation to the changes of its environment. Enterprises are constantly forced to adaptation, because in the medium term – due to technological progress and innovation – product life cycle is getting shorter. They must also respond to changes in international division of labor which leads to restructuring actions¹. In Poland, in the public consciousness, these processes are associated with rapid economic change of the transformation from 20th century 90s or economic downturn of 2002-2004. Present restructuring concerns the global financial crisis and is negatively associated with unemployment, mass layoffs and bankruptcies. In the past, many restructuring processes resulted in undesirable consequences for communities and regions that worsening their situation². Success of changes depends on the way of carrying them out, cooperation between social partners and the mutual trust. The negative consequences of those changes mainly affects laid off people who become unemployed.

Restructuring of employment is a result of its level mismatch to the organization's needs. According to K. Sochacka this process is undertaken, as employers need to adapt for changing economic, technical and organizational conditions³. According to A. Pocztowski labor surplus can be analyzed further in quantity, quality, temporal, spatial, or cost dimensions⁴. This researcher also indicates three groups of factors that cause employment mismatch: (1) economic like business conditions, irrational use of time, high labor costs and inadequate remuneration systems; (2) technical like new technologies that modernize workplaces or changing demand for labor; as well as (3) organizational like changes in organizational structures, work processes, mergers and acquisitions. Nowadays downsizing is associated with a tendency to reduce size and cost of business organization. These changes are universal, applicable to all categories of employees, including managerial staff.

Forced reduction of employment may result in many undesirable effects. Those are for example: (1) decreased activity of employees remaining in the company and not reaching expected performance and consequently decrease of their suitability for enterprise; (2)

workers desire to find a job more suited to their needs; (3) re noticing labor surplus, which leads to take another job cuts⁵. A. Downs indicates that the forced dismissal decisions are often based on calculation of lawsuits brought by laid-off workers risk, while total disregard for protection morale of persons in the company and its intellectual capital⁶. Workers reliefs are affected by, amongst others, risk of previously formed image of the company loss as well as image of its products, brands and services; loss of confidence from employees, customers, suppliers and other business partners; sending to the environment signals that company is experiencing financial, organizational, or technical difficulties; dismissal of staff influence on the level of sales, credit quality, ability to attract new suppliers, flexibility in defining terms of cooperation⁷.

Research of international auditing company KPMG regarding human resources policies in 303 enterprises operating in Poland show that the majority, 88% of surveyed companies, said that economic slowdown was the main reason for changes in their policies⁸. The main changes that were introduced was the restructuring of employment and implementation of flexible forms of employment and occupation. Researchers proposed a three categories of cost optimization by the companies in terms of human capital: (1) reduction of employment; (2) reduction of workers benefits; (3) optimizing costs of workers maintenance⁹. Downsizing allows a reduction of companies operating costs in the short term. At the end of December 2010 45% companies said they had decided on it in response to the economic downturn. Intention to continue redundancies declared 1/10 surveyed companies. For 93% companies using this method it was effective and has proved successful. In addition, companies reduced recruitment activity, reduced workers benefits, in some cases, have decided to “forced” unpaid leaves, but these solutions are less effective¹⁰. In the long run, these methods are not effective, hence the relatively few companies continue to optimize costs with their help. Some Polish companies also applied during the economic downturn long-term cost optimization methods. Mostly they were internal recruitment, flexible forms of employment and outsourcing. About 70% companies that implement them, do not intend to

abandon these tools. However, with the exception of internal recruitment and additional work load, these solutions have been used, at least two times less, than the reduction of employment or reduction of recruitment. In other words, the KPMG study shows that entrepreneurs tend mainly towards solutions oriented to the benefits in a short rather than a long period of time. Thus, exposing themselves to risks associated with the negative effects of layoffs. The use of outplacement in organizations wishing to dismiss workers will therefore allow reduction of the scope of these negative processes.

Outplacement is a special type of external de-recruitment undertaken at the initiative of employer. It's a form beside redundancies undertaken because of negative appraisal and exemptions which are a result of organizational improvements¹¹. Generally outplacement can be understood as laying off employees, which is accompanied by the organization of actions to help departing employees with finding new job. This includes activities such as counseling, retraining and searching for a new job. Such program could also be supplemented by efforts targeted to other organization stakeholders (contractors, clients, local community). Outplacement as a specialized field of consulting was born in the United States after World War II¹². First outplacement programs were government projects that were designed to help former soldiers find a job in times of peace¹³. In the 60s 20th century it began to be used as a commercial service when it was noticed that similar problems are encountered by people who suddenly and unexpectedly are losing their jobs. In Poland, the first outplacement programs started in the 90s of 20th century.

Individual researchers differently define the essence of outplacement. L. Konarski emphasizes that the launch of a program prevents or significantly reduce unhealthy

competition and conflict among employees threatened with redundancy¹⁴. Program allows monitoring their behavior during notice period, reduces insecurity, frustration, failure. Fired employee receives support from the current employer in the form of recommendations, further advice and training. Has the possibility of benefiting from professionals advice, honestly prepared labor market analysis, evaluations of industries development, economic situation of country, development trends, demand for certain specialists. The dictionary of “Detailed Description priorities of the Operational Programme Human Capital” defines outplacement by instruments by which it can be carried out: “Labour market services provided to the employee, which is during dismissal or threatened dismissal. Outplacement may include, in particular, vocational counseling and psychological assistance in finding a new job, funding training, retraining courses, assistance in resettling, resources to start a business”¹⁵. Some of broader definitions are by: M. Armstrong which considering monitored dismissals as assistance programs for laid-off workers through counseling¹⁶; M. Juchnowicz which assumes that this programs also aim to reduce “the impact of negative effects on the assessment of personnel decisions and the company’s reputation in the business environment”¹⁷; as well as by K. Makowski which states that outplacement is: “versatile and comprehensive system of care: managerial, organizational, legal, institutional, psych-sociological, and if necessary – also treatment of redundant people, designed to reduce any kind of distressing redundancies effects and as much as possible facilitate their future professional activity”¹⁸. As noted by A. Ludwiczynski outplacement should be a social investment that guarantee social consensus¹⁹. Such program should mitigate the negative emotions associated with organizational changes, reduce the risk of open conflict, reduce decrease of productivity and the risk of most valuable employees departure from the company’s. Similarly, K. Schwan and K.G. Seipel emphasize that outplacement offers “consistent with social contract” dismissal of merit employees which

should consequently lead to dynamic “winding of development” for companies and employees²⁰. It should be situation in which “everybody wins”.

Although outplacement allows limiting the negative effects of employment restructuring and unemployment rising, however, it does not allow avoid them. A. Kwiatkiewicz proposed typology of instruments related to restructuring used in Poland²¹. Outplacement was classified to management tools connected to already started restructuring process beside: retirement solutions; benefits for the unemployed; severance payments; individual compensation packages. On the other hand, points tools for restructuring anticipation: early warning systems (eg, informing labor offices by employers on projected redundancies); training and retraining for employees threatened with redundancy; activities for people aged 50+; monitoring and analysis of surplus and shortage in occupations carried out by labour offices; active labor market projects financed by the European Social Fund; investments in research and development²². Employers can therefore apply many instruments of overtaking short-term restructuring process or mitigate its course.

In conclusion, it is considered that outplacement includes de-recruitment activities, which includes reducing the negative effects of organizational and employment restructuring. It has to allow employees to overcome the stress caused by loss or lack of jobs and stimulate smooth entry into the external labor market. In Poland, outplacement programs are run by private employment services - commercial and non-governmental entities²³.

Outplacement in the context of activation policies

Outplacement have a positive impact on the perception of the company as a socially responsible and trustworthy. Help for redundant employees should brought such benefits as: improving the image of organization, a positive climate in organization, protection of key competencies and reducing the costs of lawsuits²⁴. The reduction in employment should also be preceded by an analysis on the effects not only for company but also region as well justifications of redundancy for workers and social environment²⁵. Restructuring requires, therefore, take into account not only the norms, values, attitudes and goals of companies

owners, but also others involved in its tasks and crisis. Outplacement programs can thus be analyzed in relation to the corporate social responsibility and social economy concepts. Both of these approaches are derived from different theoretical traditions, but from the perspective of contemporary social policy they are closely linked. Table 1 contains adapted to Polish conditions typology of main actors in employment restructuring process as well as roles that they can play in it²⁶. In alternative proposals it is recommended that in different parts of the social restructuring plan should be consulted and negotiated with: organizations representing the employees (eg trade unions), managerial staff, employees themselves and external organizations incorporated in restructuring (eg, employment agencies, commissions provided in collective labor agreements, government)²⁷.

Table 1. Roles of entities participating in employment restructuring process

| Type of organization | Role |
|--|--|
| Public administration | The employer, the owner or co-owner of workplace |
| Employer | Negotiating with trade unions, financing or co-financing of the outplacement services |
| The workers' representatives, trade unions | Negotiating contracts with employers such as severance, outplacement package |
| Marshal offices | Activities related to the attraction of capital, investors |
| Regional Commissions for Social Dialogue | Forum for dialogue between the social partners |
| Public employment services | Monitoring, financing or co-financing of services for laid off people |
| Private labor market institutions | Commercial: carrying out or co-implementation of outplacement programs, especially those requiring high organizational strength |
| | Non-governmental organizations: carrying out or co-implementation of outplacement programs, particularly targeted at groups in most risky situation in labor market and difficulties in finding employment |

It should be possible to identify the main benefits of participation in outplacement for firms external partners²⁸. Local authorities avoid social tensions and keep tax revenues from the newly employed persons. Public employment services fulfill with the statutory purposes by working with employers and gain experience in the outplacement implementation. Employers' organizations and employers recruit employees and establish business contacts. Private advisory companies, training and employment agencies acquire customers and build services directory. Non-governmental organizations gain experience in the implementation actions, reliability, references, financial support and opportunities for development and acquire or strengthen staff. It should be noted that the Polish employment services so far mainly been active for the unemployed and does not been partners for companies in dealing with redundancies resulting from restructuring processes²⁹. People at risk of losing their jobs are somewhat out of their system, are defined as "work seeking" employees, which does not give them access to most of the public forms of support. There is also a belief that outplacement is expensive and hard to find programs that are carried out only by consultants from commercial companies, while they are, and can be carried out also by non-governmental organizations³⁰.

It is recommended that outplacement should be implemented in framework of local partnerships and pacts. Polish and foreign experience in outplacement programs, particularly for long-term unemployed, indicate a failure of using classical model of outplacement³¹. These programs offer only assessment of the potential and motivation of laid off employees. Basic support and preparation for entering the job market are too short. This support refers to selective rather than comprehensive preparation of redundancies to the new situation on labor market and confront them to potential employers or to offer them possibility of independent start-ups. It is therefore recommended usage of adapted and environmental outplacement models – methods based on long-help and involving more entities of local and regional labor market. The first model is based on the extended program (the average 1-3 to 9 months) and adapting it to the needs of affected workers. While environmental concerns also help for unemployed and young people entering the labor market. That support contains interconnection of participants in group and usage of individual activation techniques³².

³² J. Koral, *Outplacement - sposób na bezrobocie*, FISE, Warszawa 2009, p. 9-15.

In conclusion it should be noted that outplacement is based on similar mechanisms to rebuild employability as active labor market policies. However, in contrast to these programs is aimed at helping those who are at risk of unemployment rather than those who already are unemployed. At the same time it is appropriate to supplement outplacement models by “activating impulses present in a variety of configurations between individuals and groups, and between institutions (social policy actors) understood as producers and service providers”³³. Thus, necessary are outplacement analysis which taking into account the concept of governance and social entrepreneurship. On the one hand is possible networking of actors that solve the problem of unemployment risk on a horizontal way (including for example, health, education, regional development) based on dialogue and resources sharing. At the same time outplacement may include a temporary employment and retraining in third sector and social enterprises.

Selected results of research conducted in Podlaskie Voivodship

In 2012 in Podlaskie Voivodship as part of “Innowacje na zakręcie - testowanie i wdrażanie nowych metod outplacementu” (“Innovation on the cusp - testing and implementation of new outplacement methods”) project was conducted research on outplacement. Research included a series of in-depth interviews, focus groups and quantitative CATI research (Computer Assisted Telephone Interviewing) among entrepreneurs and employees. CATI interviews were carried out in the period from October to November 2012. Below are presented some results of a survey conducted among business leaders.

Podlaskie Voivodeship, with its capital in the city of Białystok is situated in the eastern part of Poland. It borders with Belarusian Voblasts of Grodno and Brest to the east, Lithuanian Counties of Alytus and Marijampolė to the northeast and with Kaliningrad Oblast of Russia to the north. Region covers an area of 20.180 km², ie 6,4% of the country. In 2011, the 31,9% region surface were areas for nature conservation³⁴. In the years 1988-2011 there was a slight increase in the number of residents – from 1188 thousand inhabitants in 1988 year to 1200 thousand in 2011³⁵. At the same time there was a decline in population pre-production age (17 years or less) from 361 thousand (30,3% of entire region’s population) to

³³ A. Karwacki, *Papierowe skrzydła. Rzec o spójnej polityce aktywizacji*, Wyd. Naukowe Uniwersytetu Mikołaja Kopernika, Toruń 2010, p. 70

³⁴ *Bank Danych Lokalnych*, GUS, www.stat.gov.pl/bdl [14.07.2013].

³⁵ *NPR i PSR 2002. Raport z wyników spisów powszechnych - Województwo Podlaskie*, Urząd Statystyczny w Białymstoku, Białystok 2003, p. 32; *Bank Danych Lokalnych*, *op. cit.*.

233 thousand (18,5%) as well as increase in the population over production age (60+ for women's/65+ for men) 165 thousand (13,8%) to 212 thousand (17,7%). According to estimates of the Central Statistical Office from 2008 reduce in the number of population of region is expected³⁶. Until 2035 year, it will be 120 thousand inhabitants less in Podlaskie Voivodeship. At the same time number of pre-production person will be reduced from 242 thousand (20,3% of entire region's population) in 2007 year to 165 thousand (15,3%) in 2035³⁷. In the forecast period number of people in retirement age will increase from 202 thousand (17,1%) to 303 thousand (28,3%). Unfavorable demographic trends is accompanied by the lowest average population density in the country, which in 2011 amounted to 59 persons per km² and was significantly lower than the national average 123 persons per km²³⁸. Region is characterized by a negative balance of internal and international migration for permanent residence. In 2011 year amounted -1,6 per 1000 population and was higher than the national average equal -0,1. The region is characterized by poor industrialization – there are two important developments directions: agriculture and tourism. The structure of employment in 2011 year was dominated by services (261 thousand persons). Fewer people were employed in agriculture, hunting, forestry and fishing (116 thousand persons) as well as in industry and construction (115 thousand persons). The registered unemployment rate in 2011 year was 14,1% and exceeded the national average 12,5%. Value of GDP per capita in 2010 year was 26985 PLN and it was lower against the national average 37096 PLN.

Selection of research sample included companies divided in the following industries: crafts industry in Podlaskie Voivodeship; industries crucial to region development; public sector; and starters - future growth industries. The study sample consisted of exactly 200 companies. Among the analyzed dominated small and medium-sized companies, created in the 1971-2000 years. Companies represented mainly key industries of region and public sector entities. The largest part of them represented construction industry and foodstuffs. In more than half of entities within the organizational structures are units or departments responsible for carrying out activities in the field of personnel policy. Those units employ mostly 1-2 employees. Respondents, as a specialists in personnel policy in their companies mainly have positions of owners, managers or human resources specialists. In only few enterprises monitored or group redundancies were ever conducted.

³⁸ *Bank Danych Lokalnych*, *op. cit.*.

Representatives of the selected enterprises from Podlaskie Voivodship quite often have a general understanding of outplacement concept. Nearly 31% of respondents associate them with management of human resources and labor market. A similar proportion of respondents claims it has a theoretical understanding of outplacement (27,5%). However, in the light of further results should be considered that the knowledge of these programs are very general and superficial. For 38,5% respondents outplacement is unknown concept.

Results of the study allow to say that entrepreneurs recognize an average usefulness of individual outplacement forms that were already used in surveyed companies. As particularly important are considered activities aimed at the severance payments for dismissed persons, raising their training qualifications and vocational training aimed at career change. Respondents were asked to rate on a scale from 0 to 5 suitability of various activities to support redundant workers which were used in their companies. The obtained evaluation are set on a scale of 2,3 to 3,8, which means average usefulness of individual outplacement instruments.

Table 2. Assessment of suitability for company outplacement actions

| Advisory support | Rate |
|--|------|
| Diagnosis and assessment of predispositions and professional competences | 3,4 |
| Specialist assistance in finding jobs | 3,4 |
| Access to interesting jobs that are not always available to the public | 3,6 |
| Legal aid | 3,1 |
| Coaching | 2,8 |
| Support for the organization of own business by worker | 3,2 |
| Training support | Rate |
| Job search methods and tools training | 3,3 |
| Vocational training, retraining | 3,7 |
| Increasing training qualifications | 3,9 |
| Psychological support | Rate |
| Meetings with psychologist | 2,8 |
| Development of personal skills (eg training of well-being, overcoming resistance to change, communication) | 3,2 |
| Other support | Rate |
| Possibility of the former employer office (equipment, personnel) usage while looking for work | 2,4 |
| Organisation of a special internal unit to support redundant workers | 2,5 |
| Proposal for cooperation with the “old” company in another form such as self-employment | 3,0 |
| Severance pay | 3,9 |

Source: own research, CATI on companies, N=200.

As the relatively high usefulness was rated activities involving transmission severance pay for dismissed persons (average rating 3,8). In second place are increasing professional training (3,8). As important was considered also professional training aimed at career change (3,7). Lowest rated were the forms of activities from outplacement process like: the ability to use offices of former employer (2,4), or holding a special internal unit responsible for dealing with work promotion of redundant employees (2,5). Quite low were also rated actions in the field of coaching (2,8), collaboration with psychologist (2,8), and maintain the relationship with existing employer in other forms (3,0). Activities that would be aimed at further contact of employer with laid off employee were therefore rated very low.

Such responses may be interpreted as the fact that employers who lay off employees would rather does not keep further contacts with them. Enterprises are in fact oriented on activities that will bring them benefits in a short period of time. They recognize that the easiest way is to provide workers with such support that will definitely cuts assert to other claims by the dismissed employee against former employer, and such a solution can be primarily severance payments. It is similar in the case of training, which can also be carried out after laid off the employee and which are often performed under different labor market institutions – public, non-governmental and commercial, that offer such instruments. Representatives of companies prefer to cut off themselves from the problem of redundancies and paradoxically – although generated in this way costs they will even transfer severance pay, than use - perhaps even in whole cheaper - forms of support, that require the maintenance of contact with redundant worker, support him, or even establish new forms of cooperation in the vocational field.

Another part of CATI interview questionnaire was related to outplacement implementation barriers. Respondents were asked an open question, and received responses can be divided into four groups of barriers: financial, knowledge and skills, psychological and human. Barriers were dominated by those related to lack of knowledge and organization staff proper preparation for outplacement implementation (70 respondents). The reduction or even lack of funds indicated 69 respondents. Attention was also paid to “fear of change”, or “bad attitude of employees”. Those psychological barriers were indicated by 16 respondents. Personal aspects – lack of staff for outplacement implementing – indicates 9 respondents. At the same time 6 participants of research had no opinion on the barriers.

Table 3. Barriers to the outplacement implementation in firm

| From employers side | Rate |
|---|------|
| Lack of proper knowledge among managers and HR department on outplacement | 3,7 |
| Lack of skills in use outplacement forms and methods | 3,7 |
| The high cost of outplacement conducting (such as consultancy, training, etc.) | 4,1 |
| Improperly conducted information campaign in the company - lack of information for workers about outplacement causes and how it will be implemented | 3,3 |
| Lack of employee-elected representative of the crew assigned to the contacts with company's management | 3,0 |
| Insufficient employees inform about available support | 3,2 |
| No talks of executives with an employee that will be laid off | 3,2 |
| Staff limitations - there is no one to take care of this in company | 3,6 |
| No experience in EU funds raising | 3,2 |
| Deteriorating condition of the company | 3,6 |
| Participation in the outplacement activities interferes with work, because they are carried out during working hours | 3,4 |
| Lack of access to specialists in the field of outplacement | 3,4 |
| From employee side | Rate |
| The passive attitude of the laid off workers - low interest of redundant workers in forms of support that require active participants | 3,5 |
| Insufficient awareness of outplacement carrying out benefits | 3,8 |
| Low interest of workers in the retraining possibility | 3,7 |
| Low potential of adapting of workers threatened with redundancy - much of the redundancies applies to basic professions | 3,5 |
| Labor market institutions side | Rate |
| Little experience of employment agencies and other labor market institutions in outplacement projects | 3,3 |
| Staff restrictions of labor offices and other labor market institutions | 3,2 |
| Lack of standards used in the outplacement processes | 3,4 |
| Insufficient dissemination of outplacement methodology among Polish companies | 3,6 |
| No studies on outplacement good practices | 3,5 |
| Lack of cooperation between the various institutions of support for unemployed and business development | 3,5 |
| Other barriers | Rate |
| Laws hinder employment agencies participation in projects funded by the EU in career counseling subject | 3,1 |
| Bad opinion on the use of outplacement | 2,9 |
| Low public awareness on outplacement use and its benefits | 3,7 |

Source: own research, CATI on companies, N=200.

The next part of questionnaire was assessment by the enterprise barriers of outplacement implementation divided into four groups. Namely: barriers on employers side, employees side, from labor market institutions and from other sources. Specific barriers were evaluated on a scale from 0 to 5, where 0 meant that a barrier is irrelevant, while 5 that is very important. Attention is drawn to relatively high rating of barrier located on employers side,

which considered as high cost of outplacement conducting (average rating 4,1). Slightly lower have been evaluated: lack of employers skills in the use of outplacement (3,7) as well as lack of knowledge on the subject among managers and staff responsible for personnel (3,7). Enterprises therefore admit to a lack of experience in this field.

The lowest rated barrier is “Lack of employee-elected representative of the crew assigned to the contacts with company’s management” (average rating 3,0). Very small part of entrepreneurs attention is paid to a lack of talks between management and redundant workers (3,2), as well as lack of experience in raising funds from the European Union (3,2). In other words, respondents acknowledge authoritarian imposition of redundancies for workers as granted and don’t have nothing to reproach in the lack of implementation of outplacement.

Regarding the assessment of difficulties in outplacement implementation on the employees side respondents considers that mainly those are insufficient awareness on its implementation benefits (3,8). While passive attitude of laid-off persons is not considered as major problem (3,5) as well as employees low adaptive potential (3,5). The barriers on the side of labor market institutions were also evaluated at a relatively low level. Particularly important are the “insufficient dissemination of outplacement methodology among Polish companies” (3,5) and no studies on outplacement good practices (3,5). Thus, some employers shows interest in the subject, or delegates responsibility for outplacement to other entities. At the same time respondents do not count on labor market institutions support. Employers acknowledge fact that they do not have enough qualified personnel (3,2) as well as not conduct cooperation with other actors in outplacement implementation (3,5).

In addition, respondents does not rated highly factor for poor opinion on the use of outplacement (2,9), because they might just know a little on the subject to date in good and wrong terms. Companies also do not recognize as a major obstacle the laws concerning involvement of labor market institutions in financing of outplacement projects by European Union (3,1). While as quite important was rated low public awareness of outplacement uses and benefits (3,7).

Conclusions

This article brought closer the conditions for use of outplacement by Polish companies under the global financial and economic crisis ongoing since 2008. Paper presents outplacement as a responsible form of layoffs, which should aim to minimize the risk of long-term unemployment. This concept includes the instruments and governance mechanisms close to active

labor market policies. Outplacement Success depends on the needs of stakeholders of restructured companies and their commitment in order to create a situation in which “everybody wins”. Article discusses the results of research on companies from Podlaskie Voivodship concerning barriers to the use of this concept by small and medium-sized enterprises.

Discussed results allow to conclude that the outplacement can be considered as a tool for restructuring, but does not allow to avoid it. It only allows to mitigate its course. The main barrier to outplacement development, using its instruments and implementation models based on the commercial, governmental and public entities collaboration is a very limited knowledge of outplacement issues among entrepreneurs. Outplacement tools are seen as expensive and which do not bring immediate optimization of the cost for companies. Firms prefer a rapid reduction of employment, which not only leads to conflict with redundant worker, but also aggravated relations with the crew remaining in company. Outplacement rarely is it seen as part of strategy to increase flexibility of organisation as well as its adaptation to maintain competitiveness under conditions of risk and uncertainty in environment. Entrepreneurs using conventional techniques of redundancies often make these actions in ineffective way so they do not bring positive results and become “new” obstacles for organization development.

In relation to the above conclusions, the following recommendations for the implementation of outplacement programs in Poland, especially taking into account the specificities of small and medium-sized enterprises sector was made. Outplacement programs should take into account best practices in redundancies communicating by the employers. It is reasonable too early preparation of employees to maintain their employability and to remain on standby for the possibility of redundancies. Outplacement programs should include activities not only to affected by redundancies workers, but also to those remaining in the company. The benefit for laid-off workers may be including in outplacement programs temporary forms of employment, employment in third sector and social enterprises as well as coordinate these programs in collaboration with non-employment agencies. It is reasonable to promote and strengthen local partnerships as entities that can serve adapted and environmental outplacement, and thus also improve strategic management of labor market policies at the local and regional level. It is reasonable to break the stereotype of high cost of outplacement through the promotion of best practice of employment agencies run by non-governmental organizations. Also important is the promotion of outplacement as part of corporate social responsibility. Attention should be paid that the use of outplacement by companies can contribute to creation of economic and social values and thus they can be

better perceived by customers and partners. Absence of this perspective makes layoffs as an internal problem of companies, while layoffs also bring negative effects to its environment and stakeholders. It is necessary to collect and disseminate good practices of outplacement programs usage for small and medium-sized enterprises. The literature on the subject consists mainly of studies with programs carried out by consulting firms on behalf of large companies.

Outplacement - bariery i wyzwania wdrażania przez małe i średnie przedsiębiorstwa w Polsce

Abstrakt:

W warunkach globalnego kryzysu finansowego i gospodarczego podejmowana przez przedsiębiorstwa restrukturyzacja wiąże się często z optymalizacją kosztów działalności w wymiarze kapitału ludzkiego. Relatywnie mało popularną jest technika odpowiedzialnych zwolnień monitorowanych, która umożliwia ograniczenie ryzyka długotrwałego bezrobocia oraz pozwala na zachowanie kompetencji kluczowych tak przez pracowników, jak i organizacje. Jednocześnie publiczne i niepubliczne służby zatrudnienia przeważnie nie mają doświadczenia w realizacji programów outplacement. Programy te są też trudno dostępne dla małych i średnich przedsiębiorstw. Referat opiera się na krytycznej analizie literatury przedmiotu oraz badaniach przeprowadzonych w województwie podlaskim w 2012 roku w ramach projektu „Innowacje na zakręcie - testowanie i wdrażanie nowych metod outplacementu”. Badania obejmowały serię indywidualnych wywiadów pogłębionych, zogniskowanych wywiadów grupowych oraz badanie ilościowe CATI wśród przedsiębiorców i pracowników. Główne wnioski prowadzą do twierdzenia, iż outplacement powinien być upowszechniany jako dobra praktyka społecznej odpowiedzialności biznesu. Realizacja programów może odbywać się poprzez zwiększenie roli podmiotów gospodarki społecznej - w szczególności organizacji pozarządowych realizujących zadania z zakresu polityki rynku pracy.

Słowa kluczowe:

polityka aktywizacji, antycypacja restrukturyzacji, bezrobocie, interesariusze outplacementu, partnerstwa i pakt lokalne, rozwój regionalny i lokalny, współpraca międzysektorowa, zwolnienia monitorowane.

**Outplacement - Barriers and Challenges of Implementation
by Small and Medium-Sized Enterprises in Poland**

Summary:

Under the conditions of the global financial and economic crisis restructuring undertaken by companies often is associated with the optimization of operating costs in the dimension of human capital. Relatively little popular technique is responsible outplacement, which can reduce the risk of long-term unemployment and maintains the key competencies by the employees and organizations. At the same time public and private employment services usually have no experience in implementing outplacement programs. Small and medium-sized enterprises have difficulties in availability of those services. Paper is based on a critical analysis of the literature and a study conducted in Podlaskie Voivodship in 2012 in the under the project „Innovations in the corner - testing and implementation of new methods of outplacement.” Study included a series of in-depth interviews, focus groups and quantitative CATI research among entrepreneurs and employees. Main conclusions lead to claim that outplacement should be popularized as good practice of corporate social responsibility. The implementation of such programs can be done by increasing the role of social economy actors - in particular non-governmental organizations that carry out tasks in the field of labor market policy.

Key words:

activation policy, restructuring anticipation, unemployment, outplacement stakeholders, local partnerships and pacts, regional and local development, cross-sectoral cooperation, outplacement.
